1. Basis of costing

SAFEmap mostly operates on a “per project basis”, with detailed quoting for any project and parts/sub-steps of projects. The change program is divided into identifiable steps and each is allocated as a project with specific timelines, responsibilities and costs.

Examples of the steps (and time-lined projects) in a change program are:

- Analysis and profiling
- Process and model development
- Leadership alignment
- Skills transfer to client
- Integration support
- Measurement and follow-up

Where work is performed outside of scope, the cost basis reverts to time extended, with rates dependent on the level of work to be performed, namely strategic (e.g. facilitation), tactical (e.g. leadership training) or operational (e.g. employee training).

For a quotation and/or information please fill the form on this web and we will contact you.
